                          DISEASE: DEFECTS IN FALDH ARE THE CAUSE OF SJOEGREN-LARSSON SYNDROME (SLS). SLS IS AN AUTOSOMAL RECESSIVE NEUROCUTANEOUS DISORDER CHARACTERIZED BY A COMBINATION OF SEVERE MENTAL RETARDATION, SPASTIC DI- OR TETRAPLEGIA AND CONGENITAL ICHTHYOSIS (INCREASED KERATINIZATION). ICHTHYOSIS IS USUALLY EVIDENT AT BIRTH, NEUROLOGIC SYMPTOMES APPEAR IN THE FIRST OR SECOND YEAR OF LIFE. MOST PATIENTS HAVE AN IQ LESS THAN 60. ADDITIONAL CLINICAL FEATURES INCLUDE GLISTENING WHITE SPOTS ON THE RETINA, SEIZURES, SHORT STATURE AND SPEECH DEFECTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             F I N E R

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pr infection, and to detect Helicobacter

Pr claim 61; pages 1035-1036; 1481p; English.

CC The present sequence is a Helicobacter pylori cytoplasmic protein cytoplasmic polypeptide binding cytoplasmic cytoplasmic cytoplasmic protein cytoplasmic cyt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      뭐`
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δÃ
                 The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771). Host cells containing the DNA sequences are used to produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to produce antibody and/or T-cell immune response. Antagonists of the proteins are used for the inhibition of bacterial infections, especially conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Staphylococcus aureus protein of unknown function.
Staphylococcus aureus protein; immune response induction; eye infection; antibody production; T-cell immune response; gastrointestinal infection; respiratory infection; inhibitor; bacterial infection; cardiac infection; central nervous system; kidney infection; urinary tract infection; antimicrobial compound identification; broad spectrum antibiotic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid sequences from Staphylococcus aureus WCHU29 useful in vaccines and for treatment of bacterial infections respiratory tract and central nervous system

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC homology to N-acetylmuramate Alanine ligase.

CH Helicobacter pylori has been strongly linked to chronic gastritis and duodenal ulcer disease. The nucleic acid sequences of the invention care used to evaluate compounds, especially activators or inhibitors of CC bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are calso useful for generating vaccines for immunising subjects against H. CC pylori or for use in detecting the presence of Helicobacter species in calso useful for generating vaccines for immunising subjects against H. CC pylori or for use in detecting the presence of Helicobacter species in calso useful to inhibit expression of a gene from Helicobacter species in CC aspler. Inher adapters in 100-1000 fold molar excess. These linkers are CC pylori whole genomic DNA was isolated and nebulised to a median size of C2 pylori whole genomic DNA was isolated and nebulised to a median size of C3 pylori whole genomic DNA was isolated and nebulised to unique BstXI-linker adapters in 100-1000 fold molar excess. These linkers are complementary to the BstXI-cut pMPX vectors, while the overhang is not self-complementary. Therefore the linkers will not concatemerise nor construct to each of the 20 pMPX vectors to construct a series of cannenced.

CC sequence libraries. The purified DNA samples were then
                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                  The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contides generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide Sequence 286 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polypeptide(s) useful for vaccines to infection, and to detect Helicobacter Claim 61; Page 335; 1481pp; English. This sequence represents a H. pylori cyto outer membrane or cell wall biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note=

The MurD protein is useful in a method for identifying compounds that inhibit Streptococcus pneumoniae MurD activity. Compounds identified are potentially useful as antibacterial agents.

The murb gene encodes the enzyme uridine-diphosphate-N-acetylmuramyl-L-alanyl-D-isoglutamate ligase. The nucleic acid can be used for the production of recombinant Murb protein and the implementation of large scale screens to identify new antibacterial compounds targeted at the stem peptide biosynthetic pathway involved in the synthesis of the bacterial cell wall. Structural analysis of the Murb protein will enable structure-based drug design to develop novel compounds for the treatment of antibiotic
                                                                                                                                                                                                                                                                      Streptococcus pneumoniae; antigen; vaccine; inf detection; pneumonia; otitis media; meningitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Streptococcus pneumoniae mur D biosynthetic gene - which encodes uridine-diphosphate-N-acetylmuramyl-L-alanyl-D-isoglutamate ligase, useful for identifying antibacterial compounds Claim 1; Column 13-16; 14pp; English.
             Nucleic acid encoding antigenic peptide(s) from Streptococcus pneumoniae - or their epitope-containing fragments, useful in protective or therapeutic vaccines, and for diagnosis Claim 11; Page 72; 118pp; English.

This sequence represents the protein encoded by the Brevibacterium flavum murF gene of the invention. The DNA sequence is contained within the chromosomal DNA fragment of the invention. The chromosomal DNA fragment to the invention of the chromosomal DNA fragment contains a segment which has a SphI site at one end, a BamHI site at the other end, and when it is digested by XbaI gives two fragments of 1.2 kb and 2.1kb. The murF gene encodes a UDP-N-acetylmuramoyl-L-alanyl-D-glitamyl-meso-2,6-diaminopineryl-D-alanyl-D-alanine synthetase. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    pneumonia, otilis media or meningitis: Probes based on the nucleic evidere used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-30) mu g/ml per dose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 murF gene; synthetase;
suicide vehicle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein, gene and DNA fragment can be used to make an artificial cell replication control, and an antilytic strain breeding. They can also be used in the development of suicide vehicle by artificial lysing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   N-PSDB; T99927

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence corresponds to a Plasmodium falciparum strain K1 pre-erythrocytic liver stage antigen-3 (LSA-3) protein. The encoding gene sequence was isolated by screening a P. falciparum strain T9/96 library with serum from a missionary treated by prophylaxis (for strain T6/96 see FR9101286). Of 20 clones isolated, clone 7295 was used to screen a library generated from Thai strain K1. One clone contained a 6.85 kb insert including the genomic sequence T78867. The gene comprises a 1.8 kb region encoding 3 major blocks of tetrapeptide repeats (especially the amino acid sequence WEES, VEEN, VEEN, VAPT, etc) and a 3' hydrophobic region corresponding to a glycosyl-phosphatidyl-inositol membrane anchoring sequence. The invention relates to new polypeptides of at least 10 amino acids derived from the LSA-3 protein with the acception of the protein services and the second of the control of the contro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Helicobacter polynucleotide and polypeptide sequences - useful to revent or prevent gastrointestinal infection

Sclaim 1: Page 282: 362pp; English

This claimed Helicobacter pylori polypeptide, designated GHPO 208, can be used in vaccination methods for preventing or treating the second control of the invention also provides:

(See V52009-93) that encode them. The invention also provides:

(See V52009-93) that encode them. The invention also provides:

(See V52009-93) that encode them and related expression cassettes, vectors and transformed or transfected host cells; live vaccine vectors that contain the polynucleotides of the invention and which can be used to prevent or treat Helicobacter infection; therapeutic and/or prophylactic methods involving administration of polynucleotide of prophylactic methods involving administration antibodies; methods for detecting the presence of Helicobacter in samples using a

Endonuclease I from super-thermophilic archaebacteria, P.furiosus useful for genetic engineering Claim 5; Pages 7-14; 18pp; Japanese.
The present sequence is the P. furiosus strain KOD1 (a super-thermophilic archaebacteria) DNA polymerase, which contains the claimed enzyme, endonuclease I. The endonuclease has a mol. wt.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     rare cleavage site, for cutting DNA into large fragments Claim 9; Page 14-16; 19pp; Japanese.
The present sequence is that of endonuclease 2, isolated from DNA polymerase of Pyrococcus furiosus strain KOD1. The endonuclease 2 is an approx. 62 KDA protein, and is a rare cutter (see T14693), cleaving DNA into large fragments. The specification states that the sequence is 537 residues but only 536 residues are given.
